

## Mobitel offers customised Internet data plans

With Internet usage moving on an upward trajectory, Mobitel recently introduced three new customised data plans.

Catered towards high internet usage customers, these new data plans are categorised based on frequently used applications such as Facebook, Twitter, YouTube and LinkedIn.

The National Mobile Service Provider's new data plans are attractively priced and are designed to support a range of Mobitel's pre-paid and post-paid Internet customers. The data plans are categorised as: Social Networking (990MB), Mail (490MB) and YouTube (2490MB).

The introduction of these new Internet data plans provides greater flexibility to Mobitel's customers, giving them the opportunity to pick a suitable plan based on their Internet usage patterns.
