The latest from Swatch SISTEM51

Swatch SISTEM51 is an automated (self winding) mechanical movement made from 51 components made possible by a simplified and more efficient design.

Swatch SISTEM51 is also the only mechanical movement whose assembly is 100

percent automated. The high-tech escapement has no regulator; the rate is set at the factory with a laser, making the manual rate adjustments normally required by a mechanical watch unnecessary.

SISTEM51’s movement is made entirely of ARCAP, an alloy of copper, nickel and zinc with exceptional anti-magnetic qualities. And since all movement components are hermetically sealed within the case, no moisture, dust or foreign objects can interfere with its operation. The resulting inner peace guarantees the movement a long, serene life and enduring performance.

Swatch is distribtuted in Sri Lanka by W A De Silva and the new range is available from their showrooms.
