

The latest from Swatch SISTEM51

Swatch SISTEM51 is an automated (self winding) mechanical movement made from 51 components made possible by a simplified and more efficient design.

Swatch SISTEM51 is also the only mechanical movement whose assembly is 100 percent automated. The high-tech escapement has no regulator; the rate is set at the factory with a laser, making the manual rate adjustments normally required by a mechanical watch unnecessary.

SISTEM51's movement is made entirely of ARCAP, an alloy of copper, nickel and zinc with exceptional anti-magnetic qualities. And since all movement components are hermetically sealed within the case, no moisture, dust or foreign objects can interfere with its operation. □The resulting inner peace guarantees the movement a long, serene life and enduring performance.

Swatch is distributed in Sri Lanka by W A De Silva and the new range is available from their showrooms.
